

## MAXON News – Construction Advancing on Second Manufacturing Plant with Plans for Full Operation in 2022

As announced earlier this year, Maxon Lift Corp is building its second manufacturing plant in Monterrey, Mexico. The first phase of the project will add 400,000+ square feet of manufacturing space, with up to 600,000 square feet of building space in future phases. This additional capacity will give Maxon the capability to build over 100% of the liftgates needed in the North American market, with more capacity available in future phases to fill industry demand for the next 20-30 years.

Maxon Lift Corp. is pleased with the progress of the construction project. Despite the worldwide supply chain issues that also impact construction projects, the plant is on target to be fully operational in 2022. Additionally, Maxon has already hired a core team that will be responsible for the start up of the new site.

“The entire Maxon family is very excited about this opportunity,” says Casey Lugash, member of the Office of the President for Maxon, “This investment shows the family’s commitment to the North American liftgate industry, and our confidence that Maxon will continue to be the leader of the growing North American liftgate market.”

“We have already been heavily investing in state-of-the-art manufacturing technology in our current plant,” says Maxine Lugash Stratton, also a member of the Office of the President, “This new plant will take that commitment to the next level. We will be installing the latest in automation and manufacturing technology to make this plant a world class operation.”

“This is very exciting for our customers,” says Brent Stratton, the third member of the Office of the President, “The location of this plant will lower transit times to our customers by up to a week. Add in the fact that we are more than doubling capacity with this plant, we expect lead times to become a thing of the past in the liftgate industry.”

Upon completion, Maxon will have over 800,000 total square feet of liftgate manufacturing space spread across the two plants.

### **ABOUT MAXON**

Maxon Lift Corp. was founded in 1957. That same year, owner Max Lugash invented the Tuk-A-Way® liftgate, which remains the largest selling style of liftgate in North America. For more than sixty years, Maxon Lift Corp. has initiated and developed a variety of innovative products that have become truck equipment industry benchmarks.
